

Collaborative management of your DSD and Warehouse demand, orders, receiving, and accounting, in one system.

Direct Store Delivery and iTradeNetwork

Do you have trading partners doing Direct Store Delivery (DSD) programs? Utilize your existing Order Management System with iTrade by incorporating iTrade's DSD module and optimizer. Manage multiple workflows, optimize POs to build full DSD trucks, and automate much of the order creation process, saving you time and money. As a part of the iTrade Order Management Solution Suite, the iTrade DSD module enhances the existing benefits you leverage with your OMS solution today.

Enhance Your Existing Order Management Solution

Managing DSD orders can be a very manual process. Ensuring vendors are shipping full trucks and making the most efficient stops is key to any business. iTrade's Direct Store Delivery module generates a Suggested Order Quantity (SOQ) and optimizes your DSD orders to your preset conditions. With your pricing, quantities, extraservices/ allowances, arrival dates, etc. already inputted, optimized, and visible — creating DSD orders takes a fraction of the time. Leveraging the existing iTrade functionality in your order management services, iTrade's DSD module is your one stop for quick, efficient, optimized DSD order and load management.

DSD Features

- > Manage all DSD stores on iTrade Portal
- > Include Extra-Services and Allowances — Off-Invoice and/or Bill Back
- > Links directly to your existing Order, Receiving, and Accounting solutions
- > Load Optimizer — Optimize your DSD POs to create full and cost effective loads and orders

Benefits

- > Increased efficiencies from managing all warehouse and store orders from one system
- > Increased visibility and control over complete supply chain
- > Improved margins from optimized transportation and improved cost management
