

Does Your Supply Chain Align With Your Customer's Expectations?

Today's consumers demand the highest quality foods, with greater nutritional and product transparency. Commercial restaurant and foodservice operators must focus on the ongoing delivery of compelling value to the consumer, while efficiently sourcing more customized solutions from suppliers.

Effectively managing supply chain complexity has become a strategic imperative for operators, who must look to their supply chain partners to assist them in the pursuit of value. Full visibility, supplier collaboration and assessment create the basis for continuous improvement and are essential in uncovering cost savings. Supply chain executives must keep quality, cost and competitive advantage top of mind, and getting the procure-to-pay cycle right is essential. Tools that provide collaboration and visibility, while streamlining data for easy assessment are essential in the ongoing effort to reduce costs, improve agility and satisfy your customers.

The Global Food Network

iTradeNetwork is the world's largest food trading network, connecting you once to more than 10,000 trading partners. As the industry standard for online procurement, iTradeNetwork has extensive experience working with some of the largest foodservice management companies and restaurants in the world.

Data Makes The Difference

iTradeNetwork brings real-time data from across the supply chain into one tightly integrated, highly collaborative and functionality rich network. iTradeNetwork transforms the complex world of supplier relationships and performance data into clear, actionable information and tactics. Our end-to-end solutions integrate seamlessly with your existing infrastructure and systems to help you proactively managing every aspect of your supply chain.

"The analytical agility provided by clean data provides more savings opportunities than most foodservice organizations are staffed to pursue. iTradeNetwork's data feeds help us to act quicker to reap the financial benefits on savings opportunities or price variance issues."

Bill Schrupp, Corporate Analyst, Guckenheimer

End-to-end Supply Chain Solutions for Operators

<p>iTrade Master Data Services</p>	<p>Data Preparation - Cleanse, standardize, enrich, and synchronize client account and product data.</p> <p>GDSN Data Pool Subscribe - Certified GDSN data pool supports industry standards and simplifies exchanging GS1 data via the GS1 Global Registry®.</p>
