

## Crossdock with a Click

The OMS Crossdock Module allows all three parties involved in crossdocking—vendors, buyers, and crossdock facilities—to track the progress of any order and customize status updates and event notifications. At a time when labor costs make up 14% of grocers' average revenue, this module reduces the time spent on administering crossdock orders by up to 15% so your employees can focus on other value-adding activities.

## Benefits of OMS Crossdock

- Automate the manual creation and updating of crossdock POs
- Save over 40% in delivery costs
- Plan ahead with clear identification of third-party crossdock fees
- Communicate with vendors more effectively—vendors receive invoices once the loads arrive at crossdock facilities
